2-[(*E*)-(3,4-Dimethylisoxazol-5-yl)iminomethyl]phenol

H.-K. Fun, M. Hemamalini, A. M. Asiri, S. A. Khan and K. A. Khan

Abstract: The title compound, C₁₂H₁₂N₂O₂, has been synthesized by the reaction of 5-amino-3,4-dimethylisoxazole and salicylaldehyde. The molecule adopts an *E* configuration about the central C=N double bond. The dihedral angle between the isoxazole and phenyl rings is 4.2 (2)° and an intramolecular O-H...N hydrogen bond generates an *S*(6) ring motif. The crystal studied was a non-merohedral twin with a domain ratio of 0.834 (4):0.166 (4).
